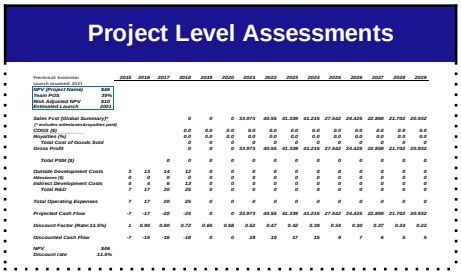
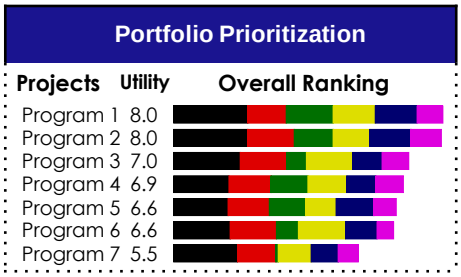
Kromite Portfolio Management

Kromite's Portfolio Management experts will help you make important trade-off investment decisions and robust project portfolio investment selections tailored to accomplish your short, medium and long-term objectives. Whether your needs require balancing an existing portfolio, prioritizing new investment opportunities or optimizing your portfolio investments against constraints – our consulting engagements identify your portfolio opportunities and risks – and turn them into action.



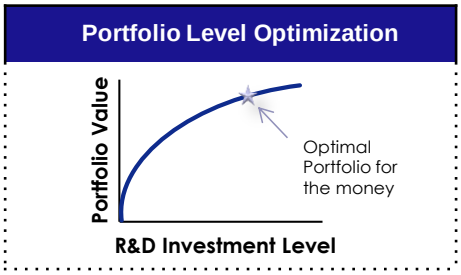
Portfolio Project Level Assessment

- Assess each project in portfolio against a common set of standards
- Perform project valuations and risk assessments as needed
- Ensure project level data are "apples-to-apples" comparison across portfolio



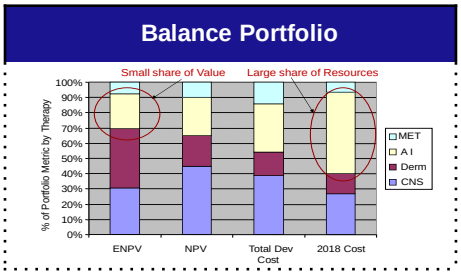
Prioritization of New Investments

- Development & life cycle programs
- Organizational alignment & focus
- Internal allocation of resources
- Linked to single or multiple company objectives



Optimization of Portfolio

- Identify most efficient investment mix to provide highest bang for buck spent
- Maximize portfolio value within budget and resource constraints
- Maximize portfolio value within acceptable risk



Balance of Portfolio Risk & Revenue

- Ensure revenue & profit to achieve short and long term goals
- Balance portfolio with acceptable amount of risk across new programs and marketed products
- Gap identification for licensing objectives
- Identify actions to capture upside potential and manage risk of your portfolio
